Here are a few things that users of Bcfg2 have to say about it:

- ... With so many machines and so much variation and subtleties between machines. I would simply go crazy trying to manage and maintain these machines. Bcfg makes my life much simpler. -- Ti Leggett
- When I took over managing a compute cluster, its configuration management was a mess. A liberal dose of Bcfg cleaned up the machines, made them more secure, and gave me the information needed to keep an eye on them. I definitely trust the cluster more now that its configuration is well-defined and well-managed. -- Cory Lueninghoener
- "Bcfg2 propaganda" - Two days ago Mathieu Jobin had sent a message to bcfg-dev mailing list containing a link to Yahoo!'s grid white paper mentioning Bcfg2. As I don't think Bcfg2 is getting as much attention as it should, I thought about mentioning it here. ... -- Cezary Morga
